

Ilco/Silca GTI Transponder

This bulletin is to inform you that, beginning immediately Ilco is instituting a rolling change to the physical shape and size of the GTI transponder. The GTI transponder will no longer be a glass tube transponder. The GTI transponder going forward will now be a black, ceramic wedge transponder as below.

The new physical shape will not affect performance or vehicle applications that are covered. Ilco will continue to refer to this transponder as the GTI. The new physical shape will continue to fit into the GTH head and GTS Look-Alike shells. This is simply a rolling change. Any existing inventory of glass tube GTI transponders will continue to work as usual.

Please contact your Ilco Sales Representative with any questions.
