

## Optional Instacode and Kreate-A-Key Code Software Interface For Futura

The optional upgrade allows the Futura to interface with both the Instacode and the Kreate-A-Key code programs. Once activated, owners can by-pass the search screens in the Silca APP and send cutting jobs\* directly to the Futura using these code programs.

When utilizing the code software for creating Master Keying jobs, the information can be sent directly to the Futura to avoid inputting the cut information two times. When the "Cut Key" command is issued from the code software, the cutting job is sent to the "Queue of Jobs" file in the Futura software. The operator can then go to the job queue on the Futura tablet to activate the cutting job. Once the cutting job has been activated the Futura software will guide the operator through the process of loading and cutting the key.

Order Number: BK0461XXXX INSTACODE/KAK INTERFACE (FUTURA)

The serial number on the back of your Futura will be required at time of order. This unique number enables activation of the optional software interface.

*\*The Futura will only accept cutting jobs for SSN's that are currently loaded in the Futura's database. As new code series or applications for the North American Market are added to the Instacode and Kreate-A-Key database we will add them to the Futura database as quickly as possible.*
